

MAK POLYKOTE

Coal Tar pitch or Bitumen based Anti-corrosive wrapping Tapes

Mak Polykoteis an anti-corrosive tape based on Coal Tar pitch or Bitumen and specifically designed to comply with the requirements of IS:10221-1982 It incorporates a central core of HMHDPE film which lends mechanical strength, dimensional stability to the product. These central cores are laminated with 2 layers of coal tar or bitumen mix. The final product has a top and bottom layer of thermo fusible HMHDPE Film. All the five layers are calendered together to create this revolutionary 2mm thick tape. The material conforms to IS:15337-2003 and AWWA: C203-2008.

Application Procedure

- ◆Wire brush the Pipe to remove al foreigndebris.
- ◆Apply a coat of Mak Primer @ 200 gm/sqm and allow it to dry till it becomestacky.
- MakPolykoteisthen wound around the pipe in spiral or circumference fashion and bonded to pipe by thermo fusion process using LPG Torch. An overlap of 12mm is to be allowed. The overlapsare to be sealed by thermo fusionprocess. The overlap on each side of the welded joints is to be 50mm.
- •An area of 250 mm at the end of the Pipes is to be left uncoated to permit installation and welding. This area is to be coated after welding.
